

Uber Movement Data

Problem Statement

Uber travel time data has been used for the below analysis. Objective of the analysis is to Predict approximate time to travel between point A to point B at given interval of the day. We have considered 2019 Quarter4 data for the analysis. Data provided by Uber is aggregated at different levels i.e. monthly, weekly, daily and hourly.

Data Sources and descriptions

➤ Uber Movement Data:

- [https://movement.uber.com/explore/bangalore/travel-times/query?si=573&ti=&ag=wards&dt\[tpb\]=ALL_DAY&dt\[wd;\]=1,2,3,4,5,6,7&dt\[dr\]\[sd\]=2020-03-01&dt\[dr\]\[ed\]=2020-03-31&cd=&sa;=&sdn=&lat.=51.51262&lng.=-0.1658002&z.=12&lang=en-US](https://movement.uber.com/explore/bangalore/travel-times/query?si=573&ti=&ag=wards&dt[tpb]=ALL_DAY&dt[wd;]=1,2,3,4,5,6,7&dt[dr][sd]=2020-03-01&dt[dr][ed]=2020-03-31&cd=&sa;=&sdn=&lat.=51.51262&lng.=-0.1658002&z.=12&lang=en-US)

➤ Time Frame:

- 2019 – Quarter 4

➤ Wards data:

- Bangalore wards file contains the list of wards with their spatial co-ordinates
- This is in json format

➤ Aggregated data:

- Uber provides the data of average time taken to travel between from point A to point B
- This data has been aggregated at weekly, daily and hourly data
- This file is in the excel format

➤ Data Dictionary:

Wards data

Data Preparation steps for wards data:

Step 1: Converted json file to csv

Step 2: Prepared data such there are no blank cells in between the range of co-ordinates (refer below image)

Step 3: Final output file is validated against the original input file

Before cleansing:

- Derived fields:
 - mean_travel_time_mins from mean_travel_time
 - Standard_deviation_travel_time_mins from Standard_deviation_travel_time
 - Geometric_mean_travel_time_mins from Geometric_mean_travel_time
- Hourly data gives us time taken to travel between 2 points for every hour of the day
- Mean travel time can be 0.5 mins when distance between 2 points are minimum
- Mean travel time can be 181.2 mins (3 hrs) when distance between 2 points are minimum
